# Manufacturers

TimoTwo FX

TimoTwo sets the standard of Wireless DMX with unprecedented possibilities. This fully integrated DMX/RDM module with Bluetooth offers over-the-air firmware upgrades, SMT mounting and a u.FL connector for external antennas. The SPI interface can be used for both RDM and control allowing for a seamless integration into fixtures and transmitters.

KEY FEATURES
- CRMX and W-DMX Transceiver
- Bluetooth connectivity
- RDM in RX and TX* mode
- Pre-Certified SMT Module

Optional feature

TiMo FX & RX

TiMo has the same footprint as TimoTwo with features such as over-the-air firmware upgrades, SPI Interface, SMT mounting and an integrated on-chip antenna as well as a u.FL connector for external antenna. Available in two different versions offering receiver or transceiver capabilities for equipment where Wireless DMX is a standard option.

KEY FEATURES
- CRMX and W-DMX Transceiver
- RDM in RX mode
- Pre-Certified SMT Module

Pluggy FX & RX

Pluggy is the easiest way to quickly integrate Wireless DMX by using the 2x6 pin header, making it the ideal module for projects where Wireless DMX remains an optional accessory with either receiver or transceiver capabilities.

KEY FEATURES
- CRMX and W-DMX Transceiver
- RDM in RX mode (only pluggy FX)
- Pre-Certified Pin Head Module

CRMXchip

The CRMXchip is the world's smallest Wireless DMX receiver. Built on the latest chip technologies, CRMXchip includes everything needed for manufacturers to add a multi functional Wireless DMX receiver into high volume products.

KEY FEATURES
- CRMX and W-DMX Receiver
- Compact 6 x 6 mm size
- QFN48 SMT Chip
