

## BACnet, but without the cable

Eliminate cabling for RTU installs, cut the complexity and cost of wiring. Built for HVAC & BAS installers – rugged, secure wireless connectivity that reduces installation time and labor.

### WHY USE WIRELESS BACNET?

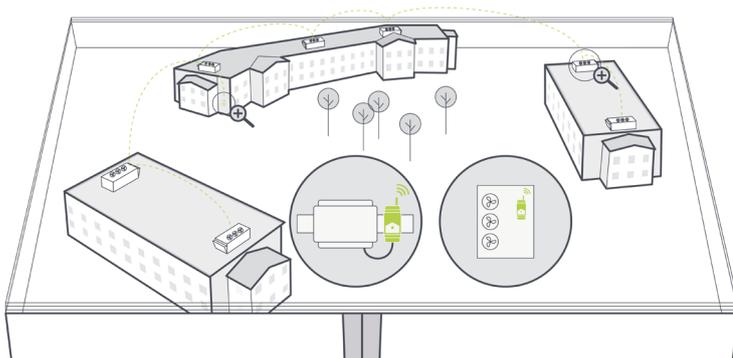

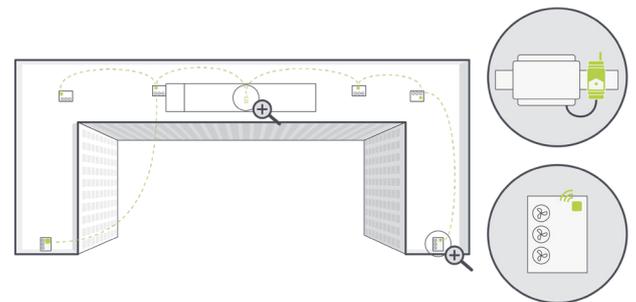

- Accelerate deployment and reduce labor costs by avoiding drilling, cable routing and sealing roofs
- Minimize tenant disruption and maintain building operations
- Secure and interference-free transmissions

### BUILDING APPLICATIONS

#### FACILITY-WIDE INTEGRATION

- Multi-tenant apartments
- Schools
- Hotels & medical offices
- Retail & logistics

#### MULTI-BUILDING INTEGRATION

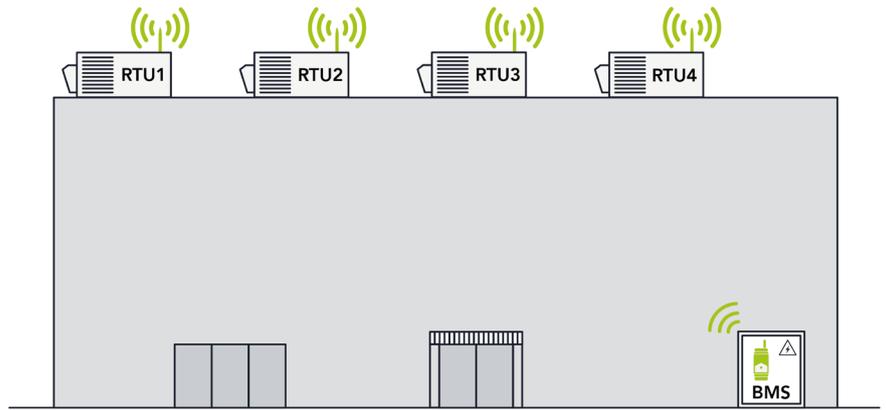

Overcome distance and terrain challenges with expendable, low-impact deployment.

- Universities
- Prison & military sites
- Business parks

# AHU & Roof Top Units

## INSTALLATION FLEXIBILITY

W-BACnet eliminates the need for expensive trenching and conduit, offering unmatched flexibility for multi-site and campus deployments. Its long-range, robust wireless mesh network effortlessly bridges vast distances and penetrates structures, solving complex installation challenges where cabling is geographically or financially impossible. This results in dramatically faster projects and reliable control across your entire property.

## RADIO & ANTENNA OPTIONS

Pair one DIN rail unit together with one of the antenna options.

### W-BACNET DIN RAIL

Easy DIN-mounted installation

### W-BACnet DIN rail PRO

Up to four BACnet devices can be connected.
